

# Names - List

/names

Returns a paged list of names details.

## Parameters

All parameters are optional.

<b>page</b>	The pagination offset for the list of results starting at 1.
<b>pagesize</b>	The number of results to display during pagination (default = 10).
<b>frommodifieddate</b>	The earliest modified date for any of the results. The format of the date is yyyy-dd-mm.
<b>parentnameid</b>	The unique identifier of the direct parent name.
<b>ancestornameid</b>	The unique identifier of any ancestor name.
<b>biostatus</b>	
<b>status</b>	

Use either the parentNameid or ancestorNameid parameter to retrieve the children or all descendants of a name.

## Response

The response will include the full details of the requested names.

<b>Names</b>	An array of the name details
<b>Total</b>	The total number of names that match the request parameters.
<b>Page</b>	The pagination offset for the list of results.
<b>PageSize</b>	The maximum number of records that will be returned for the request.

### Example response (abbreviated)

```
{
  "Names": [
    {
      "NameId": "030e9726-81c5-4aaa-b6d6-dada939f91ab",
